Projects and Hacks happening at MIT

CityCar

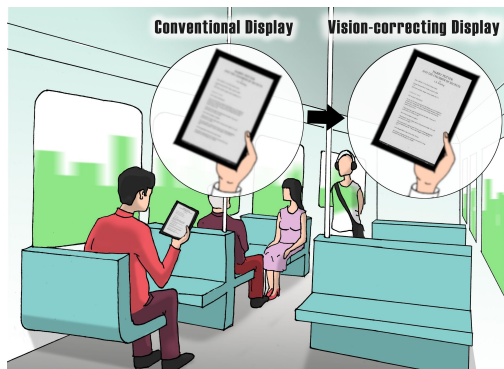

MindRider

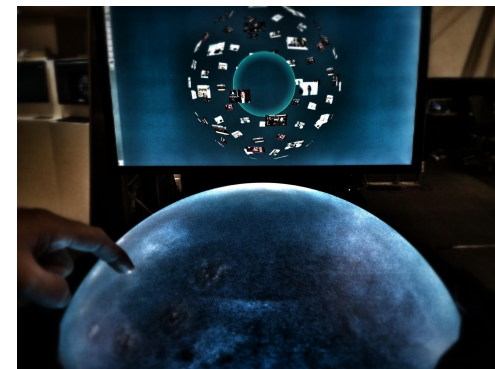

EyeRing

AIDA: Affective Intelligent Driving Agent

Eyeglasses-free Display

Crystal Ball

I have a great idea
for a project, but I need to
know what other people at MIT
think about it.

The problem

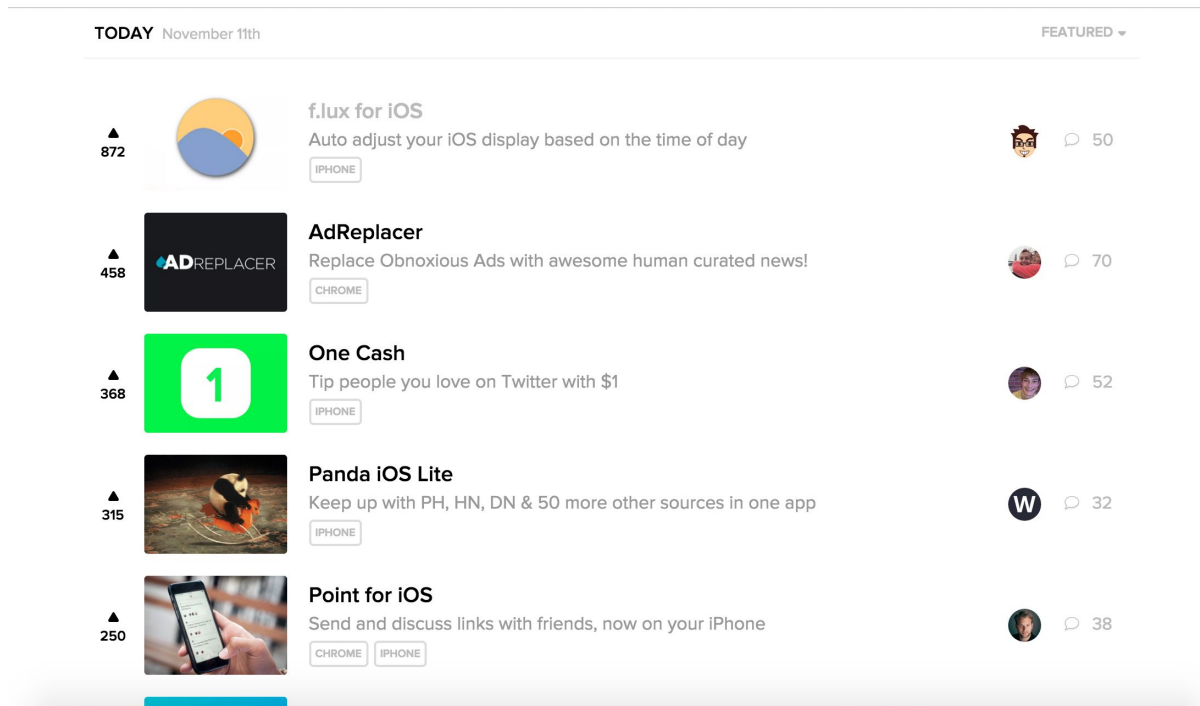

There's no common platform
for people within the MIT
community to get feedback
and visibility on projects
they're working or planning
to work on.

MIT HackTrack

A platform for people in the MIT community to:

- Share their projects
- Get feedback
- Find and contribute

How it Works

User's Can:

- Vote
- Post Projects
- Comment
- Subscribe

RISKS

MITIGATION

Users might steal project ideas	Include terms and conditions
Crowd-driven: If the platform doesn't attract enough users, it's not very helpful	Promote the app to students, professors. Developers could add projects from other sources such as Anne-hunter's mailing list or UROP listings...
Some projects might not get enough exposure if we sort by votes, date	Add a "featured hacks" that picks random projects from the oldest/lowest vote projects
Trolls might downvote projects for fun	Only allow upvotes
