

#### Design changes / clarifications

- Favoriting projects acts as a bookmark system, so that users can easily refer back to projects they have seen
- Follow a user to keep track of new projects they are working on, and recent posts they have made
- Post is either a discussion or comment (comments are replies to discussions)

#### Implementation completed over the last week:

- Creating user accounts, login/logout
- Profile pages for users
- Posting new projects, with textual description and photos, viewing projects
- Upvoting projects
- Favoriting projects
- Basic discussion capabilities
- Basic trending projects page

#### Missed milestones:

- Viewing profiles of other users
- Pretty error message handling

#### Difficulties encountered

- Current Handlebars usage makes website hard to use (don't have a URL for the current page); have not solved this yet
